LocAll4Flood

An integrative and participatory way of dealing with flash floods in the Mediterranean basin

Episodes of intense rainfall are part of the Mediterranean climate. At times, these phenomena lead to **flash floods** causing material or human damage. To tackle this risk, the LocAll4Flood project proposes an **Integrated Multi-stakeholder Governance Model (IMGGM)**, combining prevention, adaptation and mitigation actions, which is tested in **small catchments**, particularly vulnerable to flash floods. In order to have a wide range of sensitive zones, **9 pilot sites** were selected from Greece, Italy, Bulgaria, Malta, Catalonia and the Balearic Islands, covering 4 kinds of topographical areas (urban, rural, coastal, industrial). The “bottom-up” approach is privileged and several actions are put in place in order to facilitate the transfer of the LocAll4Flood solutions in the **Euro-Mediterranean basin**. After the testing phase, two additional catchments in Bosnia and Herzegovina and Bulgaria will see the IMGGM fully implemented.

Total budget: € 3 142 948.09 (European Funds: € 2 514 358.47)

Project duration: 2024-2028 (51 months)
